

## Introduction

---

The latest routine international evaluation for **conformation traits** took place as scheduled at the Interbull Centre. Data from twenty four (24) countries were included in this evaluation.

International genetic evaluations for calving traits of bulls from Australia, Belgium, Canada, Switzerland, Czech Republic, Germany, Denmark-Finland-Sweden, Spain, France, United Kingdom, Hungary, Ireland, Italy, Japan, Korea, The Netherlands, Norway, New Zealand, Poland, South Africa, Estonia, Slovenia, Portugal and the United States of America were computed.

Brown Swiss, Guernsey, Holstein, Jersey and Red Dairy Cattle breed data were included in this evaluation.

## Changes in national procedures

---

Changes in the national genetic evaluation of conformation traits are as follows:

NZL BSW/HOL/ NZL has a continuous DNA parentage testing. This affects the daughter counts, herd counts, EDCs and reliabilities.

JER/GUE/  
RDC

USA BSW/RDC As tested in the September test run, USA implemented new genetic evaluation software, updated variance component estimates, solved all traits together instead

GUE/JER of separate analyses for recently scored traits, and added rear teat placement for Jerseys (previously front teat placement was included as a substitute trait).

Decreases in REL and EDC values are due to new heritability estimates that are lower than previous values. The changes were not introduced only for JER rtp.

CHE BSW/HOL Decreased numbers of daughters/EDC/herds are small and due to changes in raw data.

CHE BSW Changed the trait definition from FUL to FUA as tested in the September test run.

ITA HOL Rolling base for all traits. Pedigree corrections and data editing causing decrease in information.

BEL HOL Improvements in the program determining the type of proof for bulls causing some bulls showing an unexpected change in type of proofs between evaluations.

DEA BSW/SIM The base changed.

## INTERBULL CHANGES COMPARED TO THE DECEMBER ROUTINE RUN

---

### Subsetting:

---

As decided by the ITC in Orlando, new subsetting was introduced in the September test run. Sub-setting is necessary for operational purposes and restrictions of time scales. To minimize the effect of subsetting, larger subsets with 10-12 countries and with 4 link providing countries have been applied.

### Window:

---

According to the decision taken by ITC in Orlando, the following changes have been introduced in regards to the windows used for post processing:

The upper bounds have been set to 0.99 as these were judged to have very little effect on evaluations. The lower values have been set to about the 25% percentile value. The largest changes are for the lower values for conformation traits, with the lowest window being 40% for OFL otherwise it is about 50% for all other confirmation traits. It is anticipated that these low values may not have large impact on evaluations since there were very few countries combinations whose estimated correlations fell between the old limit of 0.30 and these new limits.

## DATA AND METHOD OF ANALYSIS

---

Data were national genetic evaluations of AI sampled bulls with at least 10 daughters or 10 EDC (for clinical mastitis and maternal calving traits at least 50 daughters or 50 EDC, and for direct calving traits at least 50 calvings or 50 EDC) in at least 10 herds. Table 1 presents the amount of data included in this Interbull evaluation for all breeds.

National proofs were first de-regressed within country and then analysed jointly with a linear model including the effects of evaluation country, genetic group of bull and bull merit. Heritability estimates used in both the de-regression and international evaluation were as in each country's national evaluation.

Table 2 presents the date of evaluation as supplied by each country

Estimated genetic parameters and sire standard deviations are shown in APPENDIX I and the corresponding number of common bulls are listed in APPENDIX II.

## SCIENTIFIC LITERATURE

---

The international genetic evaluation procedure is based on international work described in the following scientific publications:

International genetic evaluation computation:

Schaeffer. 1994. J. Dairy Sci. 77:2671-2678  
Klei, 1998. Interbull Bulletin 17:3-7
