

## Introduction

---

The latest routine international evaluation for **longevity trait** took place as scheduled at the Interbull Centre. Data from twenty one (21) populations were included in this evaluation.

International genetic evaluations for direct longevity trait of bulls from Australia, Belgium, Canada, Switzerland, Germany, Denmark-Finland-Sweden, Spain, France, The United Kingdom, Ireland, Israel, Italy, New Zealand, The Netherlands, The United States of America, Hungary, Norway, Slovenia and Czech Republic were computed. Brown Swiss, Guernsey, Holstein, Jersey, Red Dairy Cattle and Simmental breed data were included in this evaluation.

## Changes in national procedures

---

Changes in the national genetic evaluation of longevity traits are as follows:

DEA BSW Base group is shifted by 4 months  
Minor loss of data for few bulls related to some corrections/updates in the data base

DEU HOL Some changes in number of herds/daughters due to the exclusion of daughters without culling date  
and with last calving date over 750 days ago.

ZAF RDC Data since Dec 2011 is now included for herds participating in Milk Recording at the ARC.

SVN HOL/BSW Minor changes in numbers of herds/daughters due to pedigree change and/or phenotypic data improvement  
SIM

NZL HOL/JER Base change  
RDC/BSW Some decrease in information due to parentage testing  
GUE

CHE HOL/BSW Some decrease in information due to continuous work on the raw data by herd-book organizations  
SIM

ESP HOL Some daughters previously mistakenly coded as culled are now corrected to censored which caused a  
slight decrease in reliability for some sires

## INTERBULL CHANGES COMPARED TO THE APRIL ROUTINE RUN

---

None

## DATA AND METHOD OF ANALYSIS

---

Data were national genetic evaluations of AI sampled bulls with at least 10 daughters or 10 EDC (for clinical mastitis and maternal calving traits at least 50 daughters or 50 EDC, and for direct calving traits at least 50 calvings or 50 EDC) in at least 10 herds. Table 1 presents the amount of data included in this Interbull evaluation for all breeds.

National proofs were first de-regressed within country and then analysed jointly with a linear model including the effects of evaluation country, genetic group of bull and bull merit. Heritability estimates used in both the de-regression and international evaluation were as in each country's national evaluation.

Table 2 presents the date of evaluation as supplied by each country

Estimated genetic parameters and sire standard deviations are shown in APPENDIX I and the corresponding number of common bulls are listed in APPENDIX II.

## SCIENTIFIC LITERATURE

---

The international genetic evaluation procedure is based on international work described in the following scientific publications:

International genetic evaluation computation:  
Schaeffer. 1994. J. Dairy Sci. 77:2671-2678  
Klei, 1998. Interbull Bulletin 17:3-7

Verification and Genetic trend validation:

Klei et al., 2002. Interbull Bulletin 29:178-182.  
Boichard et al., 1995. J. Dairy Sci. 78:431-437

Weighting factors:

Fikse and Banos, 2001. J. Dairy Sci. 84:1759-1767

De-regression:

Sigurdsson and G. Banos. 1995. Acta Agric. Scand. 45:207-219  
Jairath et al. 1998. J. Dairy Sci. Vol. 81:550-562

Genetic parameter estimation:

Klei and Weigel, 1998, Interbull Bulletin 17:8-14  
Sullivan, 1999. Interbull Bulletin 22:146-148

Post-processing of estimated genetic correlations:
